

So far, we have coded Adeline and Belinda. Do remember that these robots are for educational purposes only.

Adeline and Belinda are based on simple price action[1]. We deliberately kept them simple to warm up your coding skills.

However, the markets have evolved - it is difficult for simple price action strategies to work in today's market.

Don't fret, continue the course and we will cover more advanced and juicy strategies and ideas (especially in PT101).

[1] Price action refers to behaviours based solely on price movements.
